### DETAILED ACTION

This Office Action is in response to the amendment filed December 7, 2006. It is acknowledged that claim 3 has been cancelled.

#### *Priority*

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuroda et al. (US 5,831,296).

Regarding claim 1, Kuroda et al. shows (e.g. Figure 3a) a compound semiconductor epitaxial substrate for use in a strain channel high electron mobility field effect transistor, comprising an InGaAs layer [5"/24] as a strain channel layer and an AlGaAs layer [4, column 4, lines 31-35] containing n-type impurities as an electron supplying layer, wherein said InGaAs layer has an electron mobility at room temperature of  $8300 \text{ cm}^2 / \text{V} \cdot \text{s}$  or more [column 5, lines 5-17],

wherein GaAs layers [3,21] having a thickness of 4 nm or more [layer 3 is 10 nanometers / 100 Angstroms as discussed on column 4: lines 27-32, and layer 21 is 1000 nm / 1 micrometer as discussed on column 4: lines 18-24] each are laminated

Art Unit: 2826

respectively in contact with a top surface [3 is in contact with top surface of 5"/24] and a bottom surface [21 is in contact with bottom surface of 5"/24] of said strain channel layer [5"/24].

Regarding claim 2, Kuroda et al. disclose the compound semiconductor epitaxial substrate according to claim 1, as shown in Figure 3a, wherein the InGaAs layer constituting said strain channel layer [24] has an Indium composition of 0.25 or more [column 5, lines 5-17].

### ***Response to Arguments***

Applicant's arguments filed December 7, 2006, have been fully considered but they are not persuasive.

In response to the assertion that Kuroda does not show the dimensions of the layers in contact with the strained channel layer, Kuroda clearly shows (e.g. Figure 3a) wherein GaAs layers [3,21] having a thickness of 4 nm or more [layer 3 is 10 nanometers / 100 Angstroms as discussed on column 4: lines 27-32, and layer 21 is 1000 nm / 1 micrometer as discussed on column 4: lines 18-24] each are laminated respectively in contact with a top surface [3 is in contact with top surface of 5"/24] and a bottom surface [21 is in contact with bottom surface of 5"/24] of said strain channel layer [5"/24].

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
